Senior PHP Developer – – 3 mths remote contract

Description

3 month contract opportunity for a senior PHP API developer. Digital development consultancy in Gloucestershire. Outside IR35. Need a great communicator for direct client contact from time to time.

Experience:

1. Many years' experience so you're sh*t hot
2. Codeignitor
3. MySQL Commands and db skills
4. REST Api
5. Git source control
6. Dev Ops (not crucial but would help)
7. Linux CLI
8. Composer package Manager

Part of a team, but you'll work on your own troubleshooting and communicating with client and tech lead / CEO. A US client will need support so you'll need to be flexible with working hours – call me for clarification.

If you can help with system architecting as well, that would be a bonus.
